

BUSINESS REQUIREMENTS DOCUMENT

Project: E-commerce Sales & Customer Retention Analysis

Prepared by: Shriti Das

Tools: Python, SQL, Excel, Power BI

1. BUSINESS PROBLEMS-

The e-commerce company wants to understand its sales performance and customer purchasing behaviour to identify opportunities for improving revenue and customer retention.

2. BUSINESS OBJECTIVES-

- Analyze sales and revenue trends.
- Understand customer purchasing behaviour.
- Identify one-time and repeat customers.
- Identify high-value customer segments.
- Provide actionable insights for improving customer retention.

3. Key Business Questions-

- What are the overall sales and revenue trends?
- Which products and countries generate the most revenue?
- How many customers are repeat purchasers?
- What is the Average Order Value (AOV)?
- Which customer segments contribute the most revenue?

4. Key KPIs-

KPI	DEFINITION
Total Revenue	Quantity x Unit Price
Total Orders	Order Count
Total Customers	Unique CustomerId Count

AOV	Revenue/Orders
Repeat Customer Rate	Repeat Customers/Total Customers
Purchase Frequency	Total Orders/Total Customers
Revenue Per Customer	Total Revenue/Total Customers

5. Functional Requirements-

- Dashboard should display key sales KPIs.
- Users should be able to view revenue trends over time.
- Users should be able to analyze sales by product and country.
- Dashboards should distinguish one-time and repeat customers.
- Dashboard should provide customer-segment analysis.
- Users should be able to filter the dashboard by relevant dimensions.

6. Expected Deliverable-

An interactive **Power BI dashboard** supported by **SQL analysis** that provides actionable insights into sales performance and customer retention.
